

## vs. the **Leading Competitor**

### **Minleon**

- ✓ Minleon Features a reflective cone that provides a wider angle of light distribution.(1)
- ✓ Minleon bulbs are engineered with a silicon seal to protect components from moisture transfer and maximizing weather resistance.(2)
- ✓ Minleon bulbs have three ultra bright SMDs vs one SMD in the leading competitors bulb. (3)
- ✓ Minleon bulbs are weighted optimally to avoid sag in long runs, while not sacrificing durability.

### **Leading Competitor**

- ✗ Doesn't feature a reflective cone or lens, directing light in only one direction.
- ✗ Leading competitor bulbs lack extra weather proofing and silicone seal, increasing the chance of failure.
- ✗ The leading competitors bulb only features one SMD, three SMDs in the Minleon will help keep your installs brighter.
- ✗ Features a super thick and heavy globe causing socket strings to sag, requiring more mounting clips.
